

HEALTHY SOLUTIONS
TOTAL NUTRITION

FUEL THE GROWTH WITH ButiPEARL™

In today's production systems, just having a better feed formulation does not translate to better animal performance. ButiPEARL is an encapsulated intestinally released butyric acid for animal diets. Kemin's proprietary embedded core encapsulation allows for a sustained release throughout the intestinal tract. ButiPEARL helps enterocyte proliferation which leads to better villi growth, maximizing animal performance.

Better Absorption. Maximum Performance. Profitable application.
